

Gateway - SMTP filtering solution

Protect your business

Designed for organisations running their own mail servers. It provides a comprehensive suite of security features, all configurable via a simple web-based interface:

- **Anti-Spam Protection** - each email is subjected to hundreds of tests to establish validity. We detect emails from open relays, 'zombies' and by the language used.
- **Specify how spam is handled** - we can quarantine it or deliver it with special markers.
- **A range of settings** that adjust how sensitive our filters are to the content and origin of an email. No spam filter will ever be 100% effective but our highest level will give you the best protection you've ever had against unsolicited email.
- **Spam Digest** - summary emails of the past 24 hours activity in your Spam Folder. It allows you to see, at a glance, what has been put in there and is ideal for spotting false positives should they occur.

- **Easy access to your quarantine** - access your spam folder on our web site, or via IMAP.
- **Anti-Virus Protection** - fast and powerful protection from viruses with the ability to scan for worms, attachments and inside compressed files.
- **Outbound SMTP** - virus-scanning for outbound email. You never have to worry about accidentally infecting a customer, supplier or friend!
- **Blacklists and Whitelists** - override our spam detection and block or allow emails from certain addresses or whole domains.
- **Control over notifications** - control how the system behaves when spam or viruses are detected. Receive notifications, or not, as needed.
- **User Control Panel** - web-based interface providing control over the settings for the above features.
- **Fast Throughput** - all scans completed in seconds with no perceivable delay on email delivery.
- **No lost emails** - in the event of server or connectivity problems,

we'll queue your email and recommence delivery within 5 minutes of your server returning to normal operation. You can even review and respond to your queued email online. **NEW** - Business continuity storage - 500MB purchased now gives you a huge 5GB of storage quota!

- **Failover IP** - specify multiple delivery addresses (via twin 'A' records in DNS) so that email will seamlessly be redirected to the failover WAN IP if the primary is uncontactable. Peace of mind should one of your connections go down.
- **100% Online configuration** - everything can be configured online and changes take effect instantly. To set up you only need to amend your MX records.
- **24x7 Monitoring and updates** - virus detection signatures update every 15 minutes and we constantly review our spam detection tests.
- **Up to 50 domains** included in standard fee.
- Available from our network of Approved Partners.

**advanced spam and virus filtering
no hardware or software to deploy**

email filtering *before* it hits your network

Gateway email filtering

Issue	In-House	Gateway
Set-up costs	Server & OS, initial software licenses, technical resource to build, configure, implement and test.	Fixed monthly per-user cost, no hardware or software required. No mandatory server changes. No hidden fees for domains or aliases.
Renewal Costs	Renew security software licences.	No renewal costs.
Hidden Costs	Server replacement or expansion due to capacity or age of equipment.	No capacity, bandwidth or throughput costs.
Resilience	None without second-site infrastructure, which duplicates costs.	Redundant multiple server array in secure fail-safe environment.
Maintenance & Development	Design, implement and monitor an update strategy.	All done for you. Virus signatures are updated every 15 minutes; subscriptions to several spam databases included.
