**Setting up SMTP feed with MessageBunker: creating a new mailbox.**

From the main MessageBunker Control Panel menu select "Add Mailbox" > "Add Mailbox Manually". The screen below should appear:

Protocol: Choose SMTP

Email Address: The MessageBunker mailbox name for this feed
                                              user@domain format.

MessageBunker Password: Mailbox password.

Click "Add Mailbox", the box below will appear confirming that the Mailbox has been configured successfully.

Mailbox Added Successfully
Your changes have been applied. View Mailbox.
Please set up a forwarder on your server to **132itq3mpydi@feed.messagebunker.com**

132itq3mpydi@feed.messagebunker.com is an example of the randomly generated email address. This has to be configured on your server in order to forward emails to this SMTP feed. Please note that each account will have their own individually generated email address.

Initially this mailbox will not be marked as live when viewed from the main menu, and a red envelope will be visible on the left-hand side. The account will go live as soon you successfully forward an email to it (at which point the envelope will turn green).
